

## R0244 - Verkkosivujen kehittäminen

Using GitHub account for publishing HTML website

More info: <https://pages.github.com/> and <https://github.com/>

1. Create a GitHub personal account at <https://github.com/join> (If you already have an account, just login)
2. Select your username, enter your email and select password. Choose Free -subscription

### Join GitHub

The best way to design, build, and ship software.

**Step 1:**  
Set up your account

**Step 2:**  
Choose your subscription

**Step 3:**  
Tailor your experience

#### Create your personal account

**Username \***

This will be your username. You can add the name of your organization later.

**Email address \***

We'll occasionally send updates about your account to this inbox. We'll never share your email address with anyone.

**Password \***

Make sure it's at least 15 characters OR at least 8 characters including a number and a lowercase letter. [Learn more.](#)

[Verify account](#)

#### You'll love GitHub

- Unlimited public repositories
- Unlimited private repositories
- ✓ Limitless collaboration
- ✓ Frictionless development
- ✓ Open source community

3. After you succeeded in creating an account, you'll get a confirmation email. Use the link in the email to activate your account and login to your newly created GitHub account.

20.5.2019

4. Create a new GitHub repository from the top left corner. The repository has to be named `username.github.io`, where username is your username on GitHub. If the first part of the repository doesn't match your username, it won't work, so make sure to get it right.
5. Click Create repository
6. You're ready to upload your docs to your new repository. You can view your website <https://username.github.io/> (where the username is your GitHub username)

Tip: More info at <https://pages.github.com/>

## Create a new repository

A repository contains all project files, including the revision history. Already have a project repository elsewhere? [Import a repository](#).

Owner

Repository name \*

 lasvirt

 / 

lasvirt.github.io ✓

Great repository names are short and memorable. Need inspiration? How about **cautious-succotash**?

Description (optional)

 **Public**

Anyone can see this repository. You choose who can commit.

☐  **Private**

You choose who can see and commit to this repository.

☐ **Initialize this repository with a README**  
This will let you immediately clone the repository to your computer. Skip this step if you're importing an existing repository.

Add .gitignore: **None**

 | 

Add a license: **None** ⓘ

**Create repository**

Make sure that  
your username on  
the Owner box is  
the same than in  
repository name
